Strategic Directive for Google Antigravity Engineering Team

1. Executive Summary

NexusCut.io is officially pivoting from a website-first strategy to a mobile-first ecosystem, prioritizing iOS and Android development as the primary product line.

The website becomes a supporting platform, not the core editor.

This pivot is driven by:

- Mobile apps generate 90%+ of revenue in the video-editing category
- Users create, edit, and publish content primarily on mobile
- App Store + Google Play provide built-in distribution
- Competitors (CapCut, InShot, VN, Canva) all follow mobile-first models
- Mobile subscriptions convert at significantly higher rates

2. Technical Specification Document

2.1 System Architecture Overview

Mobile App (Primary Product)

- Framework: Flutter or React Native
- Native Video Engine:
    - iOS: Swift + Metal
    - Android: Kotlin + NDK + GPU acceleration
- AI Processing:
    - Server-side inference (Python + CUDA)
    - Models: Whisper, Rembg, Face segmentation, Motion tracking
- Cloud Sync:
    - Firebase or Supabase
    - Real-time project sync
- Payments:

    - Apple IAP
    - Google Play Billing

Backend

- Authentication
- Project storage
- AI inference endpoints
- Subscription validation
- Template marketplace
- Cloud rendering

Website (Secondary Product)

- Frontend: Next.js
- Editor: WebAssembly + FFmpeg WASM
- AI: Same backend endpoints
- Marketplace: SEO-optimized

2.2 Mobile MVP Feature Set

Core Editing

- Timeline editor
- Multi-track video + audio
- Basic transitions
- Filters + color grading
- Text + captions
- Speed control
- Export (720p → 1080p → 4K)

AI Tools

- Auto captions
- Background removal
- Face cutout
- Silence detection
- Auto beat sync

Cloud

- Project sync
- Template sync
- User accounts

Monetization

- Subscription
- Premium templates
- Premium effects
- Cloud storage tiers
- Export quality upgrades

3. Pitch Deck Content (Slides)

Slide 1 — Title

NexusCut.io Mobile-First Pivot Building the next-generation mobile video editor.

Slide 2 — Problem

Users create and edit videos on mobile. Web-only editors cannot compete with CapCut, InShot, VN.

Slide 3 — Market Reality

- CapCut: $50M–$53M monthly revenue
- InShot: $8M–$12M monthly revenue
- VN: $3M–$5M monthly revenue

- 90%+ of revenue comes from mobile apps

Slide 4 — Opportunity

NexusCut can enter the same market with:

- AI-powered editing
- Cloud sync
- Template marketplace
- Cross-platform ecosystem

Slide 5 — Solution

Mobile-first video editor with:

- AI tools
- Cloud sync
- Premium marketplace
- Desktop continuation

Slide 6 — Product Roadmap

Phase 1: Mobile MVP Phase 2: Web companion Phase 3: Full ecosystem

Slide 7 — Monetization

- Subscription
- Premium templates
- AI tools
- Cloud storage
- Export upgrades

Slide 8 — Team Execution Plan

Clear roles, tasks, and timelines.

Slide 9 — Conclusion

Mobile is the revenue engine. Website is the funnel. NexusCut becomes a full ecosystem.

4. Task Breakdown Per Developer

Mobile Team

Developer A — Core UI

- Timeline UI
- Layer controls
- Editing gestures
- Transitions UI
- Text/caption UI

Developer B — Video Engine

- FFmpeg integration
- GPU acceleration
- Export pipeline
- Audio mixing
- Rendering

Developer C — AI Integration

- Whisper captions
- Background removal
- Face segmentation
- AI endpoints
- Cloud inference

Backend Team

Developer D — API

- Auth

- Project sync
- AI endpoints
- Subscription validation

Developer E — Cloud

- Storage
- CDN
- Template marketplace
- Cloud rendering

Web Team

Developer F — Web Companion

- Project viewer
- Basic editor
- AI tools
- Marketplace

5. Timeline With Milestones

Phase 1 — Mobile MVP (Weeks 1–12)

Week 1–2

- Architecture
- Project setup
- Backend scaffolding

Week 3–6

- Timeline editor
- Video engine
- Basic transitions

- Text/captions

Week 7–10

- AI tools
- Cloud sync
- Export pipeline

Week 11–12

- Subscription integration
- Internal testing
- Beta build

Phase 2 — Web Companion (Weeks 12–22)

- Project viewer
- Basic editor
- AI tools
- Marketplace
- SEO setup

Phase 3 — Full Ecosystem (Weeks 22–40)

- Desktop app
- Team collaboration
- Advanced AI
- Marketplace expansion
- API for automation

6. Mobile App UI/UX Blueprint

Home Screen

- Recent projects

- Templates
- AI tools
- Cloud sync indicator

Editor Layout

- Timeline at bottom
- Preview at top
- Tools panel left
- Layers panel right

Tools

- Cut
- Split
- Speed
- Filters
- Text
- AI
- Audio

Export Screen

- Resolution selector
- FPS selector
- Format selector
- Premium upsell

7. Competitor Comparison

Feature	CapCut	InShot	VN	NexusCut (Planned)
AI Captions	Yes	No	No	Yes

Feature	CapCut	InShot	VN	NexusCut (Planned)
Background Removal	Yes	No	No	Yes
Cloud Sync	Yes	No	No	Yes
Template Marketplace	Yes	Yes	No	Yes
Desktop Continuation	Yes	No	No	Yes
Advanced AI Tools	Medium	Low	Low	High
Monetization	Strong	Strong	Medium	Strong

8. Final Directive for Google Antigravity

All engineering resources should be reallocated to mobile-first development immediately.

The website continues only as:

- SEO funnel
- Template marketplace
- Cloud companion editor

The mobile app becomes:

- The core product
- The revenue engine
- The growth engine
- The competitive differentiator

🟦 Slide 1 — Title

NexusCut Mobile-First Pivot Building a competitive, revenue-driven mobile video editor.

🟦 Slide 2 — Why We're Pivoting

Market Reality

- 90%+ of video-editing industry revenue comes from mobile apps
- Users create, edit, and publish content primarily on mobile
- App Store + Google Play provide built-in distribution
- Competitors (CapCut, InShot, VN, Canva) are all mobile-first
- Mobile subscriptions convert significantly better than web payments

Conclusion: Mobile is the revenue engine. Web is the support platform.

🟦 Slide 3 — What We're Building First (Phase 1: Mobile MVP)

Core Editing

- Timeline editor
- Multi-track video + audio
- Basic transitions
- Filters + color grading
- Text + captions
- Speed control
- Export (720p → 1080p → 4K)

AI Tools

- Auto captions
- Background removal

Cloud + Accounts

- Project sync
- User accounts (Google, Apple, email)

Monetization

- Subscription

- Premium templates
- Premium effects
- Export upgrades

🟦 Slide 4 — What Comes After (Phase 2 & 3)

Phase 2 — Web Companion

- Project viewer
- Basic editor
- AI tools
- Template marketplace
- SEO traffic funnel

Phase 3 — Full Ecosystem

- Desktop app
- Team collaboration
- Advanced AI tools
- Marketplace expansion
- API for automation

🟦 Slide 5 — Team Alignment Statement

NexusCut is pivoting to a mobile-first strategy because mobile is the dominant platform for video creation, editing, and monetization. Our goal is to build a competitive, revenue-generating mobile editor first, then expand into a cloud-connected web and desktop ecosystem.

Today's meeting is focused only on understanding the pivot and agreeing on Phase 1: the Mobile MVP.

🟦 Slide 6 — Immediate Action Items

Effective Immediately

- Freeze non-critical website development

- Begin mobile app architecture
- Set up backend for mobile sync
- Define mobile MVP tasks
- Start building the core editor (timeline, video engine, AI tools)

Goal: Deliver a functional, monetizable mobile MVP.

🟦 Slide 7 — Next Meeting

Next Meeting Agenda

- Review detailed technical specifications
- Assign developer tasks
- Approve timeline & milestones
- Begin implementation of Phase 1

Focus: One phase at a time. No overload. Clear execution.

📱 **NexusCut Mobile-First Pivot Plan**

Strategic Directive for Google Antigravity Engineering Team

1. Executive Summary

NexusCut.io will shift from a website-first development strategy to a **mobile-first ecosystem**, prioritizing **iOS and Android apps** as the primary product. The website will continue as a **supporting platform**, not the core editor.

This pivot is driven by:

- Market data showing **90%+ of revenue** in the video-editing category comes from mobile apps
- User behavior: video creation, editing, and publishing happen primarily on mobile
- App Store + Google Play distribution advantages
- Higher monetization via subscriptions and in-app purchases

- Competitor patterns (CapCut, InShot, VN, Canva mobile)

2. New Product Strategy

Primary Product

NexusCut Mobile App (iOS + Android)

This becomes the **core revenue engine** and main editing environment.

Secondary Product

NexusCut Web Editor (Browser)

This becomes:

- A cloud-connected companion editor
- A continuation workspace for mobile projects
- A marketing funnel
- An SEO traffic generator
- A template marketplace

3. Development Phases (Engineering Roadmap)

Phase 1 — Mobile MVP (8–12 weeks)

Goal: Deliver a functional, monetizable mobile editor.

Core Features

- Timeline editor
- Multi-track video + audio
- Basic transitions
- Filters + color grading
- Text + captions
- Export (720p → 1080p → 4K)
- Cloud sync (project storage)
- User accounts (Google, Apple, email)
- Template loader

- AI captioning (server-side)
- AI background removal (server-side)

Monetization

- Subscription (monthly + yearly)
- Premium templates
- Premium effects
- Export quality upgrades
- Cloud storage tiers

Technical Requirements

- Flutter or React Native (cross-platform)
- Native modules for video processing (FFmpeg, GPU accelerated)
- Backend: Firebase or Supabase
- AI inference: server-side (Python + GPU)

Phase 2 — Web Companion (6–10 weeks)

Goal: Provide a cloud-connected browser editor.

Core Features

- Project viewer
- Basic editing
- Template marketplace
- AI tools
- Cloud sync with mobile
- Export options

Purpose

- SEO traffic
- Desktop continuation
- Template marketplace

- Workspace for creators

Phase 3 — Full Ecosystem (12–20 weeks)

Goal: Build a complete cross-platform editing ecosystem.

Features

- Desktop app (Electron or native)
- Team collaboration
- Marketplace for creators
- API for automation
- Advanced AI tools
- Cloud rendering

4. Technical Architecture Overview

Mobile App

- **Frontend:** Flutter or React Native
- **Video Engine:** Native modules (Swift/Obj-C + Kotlin/NDK)
- **AI:** Server-side inference (GPU)
- **Storage:** Cloud sync (Firebase/Supabase)
- **Payments:** Apple IAP + Google Play Billing

Backend

- Authentication
- Project storage
- AI processing
- Template marketplace
- Subscription validation
- Cloud rendering

Website

- **Frontend:** Next.js

- **Editor:** WebAssembly + FFmpeg WASM
- **AI:** Same backend endpoints
- **Marketplace:** SEO-optimized

5. Monetization Strategy

Mobile (Primary Revenue)

- Subscription
- Premium templates
- Premium transitions/effects
- AI tools
- Cloud storage
- Export quality upgrades

Website (Secondary Revenue)

- Paid AI tools
- Paid templates
- Paid export quality
- Team workspace plans

6. Why This Pivot Is Necessary (For Engineering Alignment)

Market Reality

- CapCut: $50M–$53M monthly revenue → **mobile**
- InShot: $8M–$12M monthly revenue → **mobile**
- VN: $3M–$5M monthly revenue → **mobile**
- Canva: 70% of paid users → **mobile**

User Behavior

- 80%+ of video editing happens on mobile
- 90%+ of social content is created on mobile
- Mobile users convert better due to frictionless billing

Distribution

- App Store + Google Play provide free organic traffic
- Websites do not

Conclusion

Mobile is the **only viable path** to revenue in this category.

7. Team Action Items (Clear Instructions)

Immediate (Week 1–2)

- Freeze non-critical website development
- Begin mobile app architecture
- Set up backend for mobile sync
- Define mobile MVP feature list
- Assign roles (frontend, backend, AI, video engine)

Short Term (Week 3–12)

- Build mobile MVP
- Integrate subscription system
- Connect cloud sync
- Implement core editing tools
- Launch internal test builds

Medium Term (Week 12–24)

- Launch public beta
- Build web companion
- Expand AI tools
- Build template marketplace

8. Deliverables for Google Antigravity

You can paste this directly into your Antigravity workspace:

Required Deliverables

- Mobile app architecture document
- Backend API specification
- Cloud sync protocol
- Video engine module plan
- AI inference endpoints
- Subscription integration plan
- Mobile MVP timeline
- Web companion timeline
- QA + testing plan

9. Final Directive

NexusCut.io will adopt a **mobile-first development strategy**, with the website serving as a secondary companion platform. All engineering resources should be reallocated accordingly.
